

## Welcome to our third Newsletter!

For this Newsletter we are doing a special South West Dairy Show edition. We hope you will find something here that interests you, and if you are unable to make it to the Show, please give us a ring if you would like any further information or assistance with your requirements. We are always happy to help with any queries you may have.

## South West Dairy Show Edition

We are exhibiting at the Dairy Show, at the Bath & West Showground, Shepton Mallet, Somerset on Wednesday, 1st October. The Show opens at 8.30 am and runs until 5 pm. We can be found on

Stand 37 which is on Middle Avenue.

In addition to our normal product range which has many new items, we are showing the latest Krohne Flowmeter built as standard equipment, into a 6 mtr SlurryKat Trailing Shoe Injection machine. Garth Cairns, the new owner of SlurryKat will be on the Stand promoting his new machine. This will be its first appearance in the UK having only just been released prior to the Irish Ploughing Match taking place at Kilkenny, Ireland from the 23rd to 25th September.

Garth has a wealth of knowledge to offer as he is not only a well qualified Engineer, but also an Agricultural Contractor operating in Northern Ireland.

Tanlake Flowmetering is working with SlurryKat to produce the ideal Flowmetering system which will fully integrate with new machinery, either at the time of manufacture or as a retro-fit. This in the long term saves money as we can provide a fully computerised Flowmeter system with GPS mapping and full downloads all as a self-fit kit. We will be happy to demonstrate this on our stand and welcome any feedback or comments.

## Tanlake Farms (Flowmetering)

Phone: 0117 9322200

E-mail: [sales@tanlakeflowmetering.co.uk](mailto:sales@tanlakeflowmetering.co.uk)

Web: [www.tanlakeflowmetering.co.uk](http://www.tanlakeflowmetering.co.uk)

Moving away from the Show and looking forward, we are always happy to demonstrate our latest equipment, either to an individual or to a group. Please contact us for further information.

**Note:** Most demonstrations can be carried out on a table-top so no need to involve too much slurry at this stage!!!
