Newsletter

VOLUME 1, ISSUE 6

JULY 2009

Welcome to our latest Newsletter. We have some exciting new products which we feel will enhance our existing range and update it with the latest technology. Slurry handling is becoming an increasingly precise business with the onset of NVZ's and cleaner and greener practices. The demands are now greater in relation to accountability and traceability and we feel that we are now able to provide the equipment to meet these demands.

We cannot give all the answers in this short Newsletter, but please feel free to contact us at any time for further information and advice.

NEW PRODUCT

We have recently been appointed official Dealers for RDS Technology products, a long established Company based in Gloucestershire. Our interest lies in the RDS Delta 34i Sprayer Regulation System as shown in the photograph.

This is an in-cab controller which is an extremely versatile management and regulation system for slurry spreaders. When attached to our Flowmeter system it provides a number of display features which include: forward speed, application rate, flow rate and area covered in addition to the usual date, time and place, with job number. All the information is retained in the unit until downloaded via a memory card which fits a standard computer memory card reader.

This unit is purpose made for this application and is very competitively priced from £1,500 which includes the display head, wiring looms and GPS speed sensor. This item is in addition to our existing range of cab monitors.

RDS Delta 34i

We can e-mail this Newsletter if you let us know your address!

Topcon system 110 Light Bar Guidance System

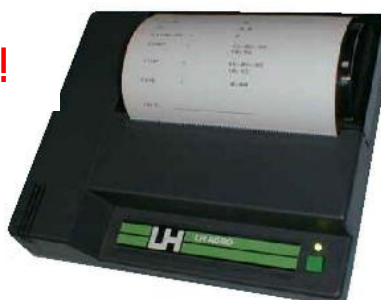

YET ANOTHER NEW PRODUCT!

Topcon Lightbar Guidance System – with detachable Light Bar, on-screen Mapping, 5" High Visibility Screen, and many other high quality features which makes this an ideal GPS system for every farm operation including Slurry Spreading.

This unit is compatible with our existing range of components and will provide GPS speed system to feed into the LH 5000 or RDS cab controllers. It is supplied with an enhanced aerial for optimum performance under all conditions. Contact us for further information or leaflets.

We are running this product line alongside the Trimble EZ-Guide 250 which is well established in our industry.

Outstanding Special Offer!

Kyoline Portable Printer for LH 5000

Printers for LH 5000

We have obtained a special price for the in-cab Printers and paper. Our previous retail price was £665 and we are now able to offer these for just **£275** each. Replacement paper now **£2.50** roll instead of £9.00. All in stock now!
