December 2019

We wish all our Customers a Very Merry Christmas and a Prosperous New Year

Dear Customer,

Another busy year for us as a Company, in spite of the uncertainty created by Brexit. In anticipation we have increased our stock levels of Flowmeters and now maintain good levels of all the popular sizes, together with spare parts. We have experimented and developed a much more reliable method of installing Flowmeters on Pump sets and areas of high vibration. The same system has been adapted for tanker installations where much of the pipework is now internal, leaving few options for Flowmeter installation. Please contact us for further information and Fact Sheets.

Our parcel collection and delivery service has been improved to facilitate collection and return for urgent repairs which are carried out in our own workshops.

Now the bad news.... In spite of ever increasing costs we have managed to hold our prices for the last four years, but regrettably there will have to be an increase in the New Year, which we will keep as low as possible.

We always welcome customer feedback which enables us to improve our service where needed and look forward to hearing from you!

New Dealer

We are pleased to announce that we have established a Dealership in Sweden with WIP Innovation based near Malmo. They are well known in that Country for their expertise in the Slurry Industry, specialising in Bauer Pumps, Separators and now Flowmetering. We welcome their involvement with our Company.

Christmas Holidays

The office will be closed from Friday 20th December until Thursday 2nd January 2020. However, John will be around to deal with any unforeseen problems on 07850091262

This event is being held at the NEC on the 7th/8th January 2020. As last year we have decided not to have our own stand as we are well represented on several other Slurry Machinery stands. However we will be at the event for the duration and hopefully meet up with many customers and friends. John can be contacted on 07850091262. He may even buy the coffee!!!

Special Offers!

After LAMMA 2020 we will have a small number of Krohne Flowmeters that will have been used for Display Purposes available at discounted prices. It is a strictly first come first served basis—so let us know if you are interested. Shop-soiled but unused— with Full Warranty

We are Exhibiting at this event—Full details nearer the time
