

Tanlake Flowmetering

Helping to Protect the Environment

Newsletter

October 2020

Dear Customer,

Well what a year we have had since our last Newsletter, who could have imagined a pandemic out-doing Brexit!

As a company we have continued to work through lock down and give our customers the best service possible. With this in mind **Chris Febrey** joined Tanlake Flowmetering at the beginning of July, a proactive, customer focused person, who has worked with some of the largest waste companies in the UK over the last 16 years and before that 13 years in the agricultural sector. Chris is involved in the day-to-day

operations and he is looking to expand into new areas, such as anaerobic digestion and industrial applications.

Tanlake Flowmetering have taken on the specialist role of **on-site** Flowmeter verification which has involved the purchase of specialist equipment and training from Krohne. This will allow contractors to have confidence that the volumes they are spreading are the volumes they are charging. Each verification comes with a detailed report and pass/fail Certificate. Verification of non Krohne flowmeters will be coming soon, for more information contact Chris on chris@tanlakeflowmetering.co.uk or 07484 932448.

HURRY ! Grant Applications due by 4th November

Third and final round of the governments Country Productivity Small Grants scheme.

£25 MILLION AVAILABLE TO HELP FARMERS BOOST PRODUCTIVITY.

Under the scheme, farmers can apply for grants of between £3,000 and £12,000 to buy new and innovative equipment, to help farmers benefit the environment by increasing the machinery precision when applying slurry.

Please see link below for more details

Tanlake Flowmetering can also offer a data logger that monitors flow over a period of time, allowing the user to monitor the peaks and troughs of flow. Please see link for more details

<https://www.tanlakeflowmetering.co.uk/products/data-logging-for-flow-meters.html>

We are currently working on a Tanker Monitoring System which will apply to both road and field tankers. The aim is to monitor loading and off-loading and to instantly print a job ticket confirming volumes, dates, times etc. The printer will be a hand held unit receiving information from the Flowmeter via Bluetooth—Watch this space and if you need any further information please call John on the number below.
