- Flow Rate M3
- Area Coverage Hectares
- Application Rate M3/Hectare
- Downloadable via USB to computer

Supplied with Krohne Flowmeter at an inclusive price of £3050 + VAT (*plus optional extras)

KROHNE FLOWMETER

With over 20 years experience of supplying Flowmeters to the Slurry Industry, we have now decided to recommend the Krohne Flowmeter in preference to other makes, for fitting to Slurry machines and Tankers. The reason for this is simple — costs!!! The Krohne is of similar price to the Siemens but due to its construction is far more robust in the harsh environment that we use it. Overall, repairs are far less frequent and costs much reduced. Because of its compact shape it is less vulnerable to accidental damage. We carry a full range of stock and spares and are authorised to carry out testing and repairs.

We continue our relationship with Siemens and carry a comprehensive range of stock and spares and again are able to test and repair in house. There are many applications where the Siemens is more appropriate and expert advice is always available to provide the best application. Just give us a call!

PLEASE REMEMBER — WE WILL NOT BE BEATEN ON PRICE FOR KROHNE OR SIEMENS FLOWMETERS

MP Visit

Tanlake Flowmetering were pleased to welcome the local MP Jacob Rees-Mogg to our premises at Burnett Business Park. He had previously expressed an interest in Flowmetering generally and wanted to have first hand experience of how the technology fitted into modern day farming and food production. He was shown around the site and some of the back room activities involved in producing state of the art equipment. The visit was rounded off with him driving a John Deere tractor fitted with auto-steer and carrying a SlurryKat 9 mtr Dribble Bar — see picture above.

John Deere tractor kindly loaned by Smart Agri Services Ltd of Cheddar
