

# Tanlake Flowmetering

Helping to Protect the Environment

## Repairs and Spares

**SIEMENS**

Tanlake Flowmetering is pleased to offer a comprehensive range of products and services to maintain the ever increasing number of Flowmeters operating within the Agricultural and Industrial environments. In this modern world of electronics it is becoming all too common to throw away and replace, but we do our best to identify problems and failures and to repair where possible.

**KROHNE**

In addition to our stock of new Flowmeters, we carry a large stock of spare parts for both Siemens and Krohne that can be despatched the same day for early delivery the following day on mainland UK.

## Testing Facilities

We have comprehensive testing facilities at our workshops in Bristol where faults can be identified and where possible, repairs carried out.

An Annual routine Health Check can be requested by those customers who charge by the volume and a Certificate of Accuracy can be issued.

Additional routine Health Checks can be carried out.

## Second Hand and Refurbished Equipment:

We occasionally have second hand and/or refurbished equipment available for resale. All this equipment is fully checked in our workshops before resale and will automatically carry a six month Warranty.

To ensure a supply of second hand equipment we offer generous trade-in terms when we quote for upgrades and replacements.

## Customer Service Policy.

Tanlake Flowmetering offers the highest quality product and customer service and to reinforce this, extend the Manufacturers' Warranty on all new equipment by an additional 12 months, making a total of 2 years warranty. We also provide a telephone back-up service for technical assistance.

In the event of accidental damage we have fully equipped workshops and a full range of spare parts.

We are approved by NFU and other Insurance Companies to provide detailed reports and quotations for insurance claims.

## Important Note:

Tanlake Flowmetering is a private Company wholly owned by John Burnham and although working with several other Nationally known Companies, has remained completely independent. You can contact us as detailed below :

Tanlake Flowmetering

## Collection and Delivery Service:

To ensure repairs are carried out as quickly as possible, we will arrange a collection and return service with our carrier.

All we ask is that the machine is clean and well packaged to prevent additional damage in transit
